Mobile Automated Diagnostic System

IN DIGITAL TECHNOLOGIES

Overview

Comprehensive Primary Health Care has an important role in the primary and secondary prevention of several disease conditions, including non-communicable diseases which today contribute to over **60%** of the mortality in India

Health screenings should be an important priority for everyone.

Screenings use tests, physical examinations or other procedures to detect disease early in people who may not show symptoms. Health screenings focus on preventive care, since diagnostic tests are often only run when a patient is already showing signs and symptoms of a condition.

Detecting a potential health problem at an earlier stage often means that treatment will be much more effective. Also, these screenings will give a chance to discuss any concerns patient may have about his/her health with the doctor.

About Kribado

World's first digital risk stratification and behavior setting device for HCPs & Healthcare Companies.

Kribado is a cutting-edge hand-held screening device that can provide non-invasive risk scores in seconds. With over **100** scientifically verified scales, it is particularly useful in Health management. This precision allows healthcare professionals to tailor their treatment plans based on each patient's unique risk profile. **Kribado** can be a game-changer by helping doctors make informed decisions swiftly, ultimately improving patient care and outcomes.
